

# SBImage - WEB

InternetWorldStats recorded 2,400,000 SA Internet users in 2000. The latest stats suggest that we currently have around 3,600,000 users.

This is an increase of 50% over the last 5 years.

Would you consider an imaging solution without:

- \* Ability to access the images from the Internet
- \* Granting secure image retrieval to your clients
- \* Minimized application support by using Intranet
- \* Ability to access the images from the branches
- \* Open-ended integration from other Web applications
- \* The facility to submit document remotely into your system
- \* Latest Internet-based technologies
- \* Flexible & customizable user-interface
- \* The facility to keep in touch with your business from anywhere
- \* Style sheet-based web pages
- \* Inherited standard security model
- \* Rapid software deployment

SBImage WEB extension module provides an easy-to-navigate Internet interface which grants access to stored documentation via the Internet. This module inherits all the security permissions available within the system.

Besides the document retrieval, the module provides the document upload facility, which will enable your clients or branches to submit their documents directly into the system utilizing the power of the Internet.

Highly customizable user-interface will provide you with the ability to modify the application to fit the corporate look-and-feel.

Open-ended architecture allows integration into the module from your custom Intranet, Extranet and Internet applications.

SBImage Web module is built based on Microsoft technologies and can be hosted on your existing IIS server on the remote server.

Standard extension points allow development of custom features such as validation of specific document indexing process.

Bearing in mind the growth of the Internet usage in South Africa and African continent, expansion of the web-enabled applications and people's acceptance of the new technologies, the Internet imaging is no longer a nice to have component.

It just takes your company one step forward right now!
